TECHNICAL SPECIFICATIONS

GU Multipoint Locks

This mortice multipoint lock is available in two options: one with a hook bolt and one without. Both versions feature automatic latchbolts for enhanced security and convenience. Additionally, these locks can be operated electrically if required, and include an automatic locking mechanism.

AUTOMATIC LATCHBOLT

Features

- Ideal for main building entrance and apartment doors.
- Features one automatic latchbolts per locking point.
- Latchbolts automatically extend 20 mm when the door is pulled shut.
- Latchbolts are secured against being forced back.
- Non fire-rated.

AUTOMATIC DOUBLE BOLT

Features

- Self-locking latchbolts are triggered first when the door is pulled shut and activate the hook bolts mechanically.
- The hook bolts move upwards to lock, providing protection against levering out during burglary attempts.
- Ensures a high level of functional reliability.
- All locking elements are secured against being forced back.
- Non fire-rated.
